(000) INTRODUCTION

I am a 55 years Information Technology Director, mid-80's computer science graduated student, living the era of technology from punch cards storage and silicon wafers to current high-speed InfiniBand network channels.

Today I am offering my lifetime ultimate collection of vintage historical personal computer systems, electronics, gaming consoles and antiques, all in working condition and fully maintained by professional hands.

Hopefully to find the right buyer who can appreciate this huge collection and can keep them for the next 30 years.

For interested computing history museums, also offering my expertise to setup and supervise the computing section as a full-time job or train a trainer for systems operations and maintenance.

Good Luck

Riyad Abdelhadi
Information Technology Director

Specification:	
CPU	Motorola MC 68000 @ 5 MHz
RAM	1 MB, 16 KB (ROM)
STORAGE	• UNIT (1) Model 2/5: External Apple ProFile 10MB HDD A9M0005 (Seagate ST-506, 3600-rpm, 62 KB/S DTR) • UNIT (2) Model 2/10: Internal 10 MB CF-based widget drive
DRIVES	Built-in 3.5'' Floppy Disk Drive SONY (400 KB)
DISPLAY	• Built-in white phosphor CRT Monitor CLINTON ELCTRONICS CEULC99FAITE (12") • GUI 720 x 364 pixels
OS	• UNIT (1): Floppy Boot: LISA OS (LOS) MAC Works XL • UNIT (2): Full LISA Office System (LOS 3.0)
KEYBOARD	Built-in full stroke 77-key with numeric keypad
SOUND	Built-in Continuously Variable Slope Demodulator (CVSD)
Network	
I/O PORTS	• 3 Proprietary Expansion Slots • Composite video

	• 1 DB-9 mouse port • 2 RS232 Serial Ports • DB-25 Parallel port (Printer, Apple Profile HDD)
EXPANSION PERIPHERALS	• Original Apple LISA Mouse
ACCESSORIES & DOCUMENTS	• Apple LOS Mac Works XL boot disks (2 disks) • Original Apple LISA software 3.5''disks • Full Set of Apple LISA Office Manual Folders: (LisaGraph, LisaCalc, LisaWrite, LisaDraw)
POWER SUPPLY	• **Computer (1) Model 2/5 with Profile**: 240V Only (Internal PSU) Plug Type: Type F, EUR, 2 Thick Round Pins **Computer Profile:** 120V Only (Internal PSU) Plug Type: TYPE A, USA, 2 Thin Flat Pins • **Computer (2) Model 2/10 with Internal HDD:** 120V Only (Internal PSU) Plug Type: TYPE B, USA, 2 Thin Flat + 1 Thick Round Pins
SPECIAL INSTRUCTIONS	• MacWorks XL: Boot from system disk 1 then insert disk 2 once 1st ejected • LISA Office System (LOS 3.1) boot: Power on external Profile, wait for disk checkup and readiness (steady full red light) then power on computer

Specification:	

COMPONENTS	• The system is a full portable system for low level programming training for the Intel 8080 processor:
	  • Launched: on April 1974
	  • CPU clock rate: 2 MHz @ 8 bits data bus
	  • Address width: 16 bits @ 40-pin DIP socket
	• Integrated Hexadecimal entry keyboard
	• Integrated 8 characters LED display
	• Integrated audio board

FUNCTIONS	• Memory word, modules and access • Functional Unit • Instruction Cycles • The Program Counters • The Instruction Registers • The Accumulator • The Clock • Program modules, subroutines and stack • Logic and BIT manipulation

	• Program Execution

ACCESSORIES & DOCUMENTS	• Original Hard Cover Briefcase
	• Original Self-Study Workbooks Course (536A):
	  • Microprocessor Real-time Interfacing Vol Workbook (1) 1980 – 480 pages
	  • Microprocessor Real-time Interfacing Workbook Vol (2) 1980 – 410 pages

POWER SUPPLY	• **System**: 120V Only (Internal PSU) Plug Type: TYPE B, USA, 2 Thin Flat + 1 Thick Round Pins

This addendum corrects a printing error on pages 7 and 9.
See reverse side for other figure

TEST PROCEDURE

1. **Install the Heep Test Module** on the Printed Circuit Board.
2. **Connect +5-volt DC power** to pin 1 of test module connector.
3. **Connect ground return** to pin Z of test module.
4. **Perform test using Output Code Table** and observe test module LED indications. The following is a description and explanation on how to use the table and how to interpret the test module indications.

Looking at the Output Coding Table, you see there are two separate groups of output coding identified as NORMAL and SHIFT. These are two separate tests. First, you check the output codes of the Encoder in the NORMAL mode (not in SHIFT LOCK). After the NORMAL mode checks, depress the completing the NORMAL mode checks, depress the SHIFT LOCK key and check the output codes of the Encoder in the SHIFT mode.

The Heep Test module has nine LED's. With the keyboard toward you, let's identify the LED's. Starting on the left going to the right, the LED's are as follows:

A. The first LED lights when a key is pressed and stays on until you release the key at which time the LED goes off (not lighted).
B. The next LED monitors and represents E output code and lights when E output code is 1 and does not light when E output code is 0.
C. The next LED monitors and represents 2^6 output codes.
D. the next monitors and represents 2^5 output codes.
E. the next monitors and represents 2^4 output codes.
F. the next monitors and represents 2^3 output codes.
G. the next monitors and represents 2^2.
H. the next monitors and represents 2^1.
I. the next monitors and represents 2^0.

For an example, let's press the first key (ESC). Note that according to Output Coding Table that E output is 0, 2^6 is 1, 2^5 is 1, 2^4 is 1, 2^3 is 1, 2^2 is 1, 2^1 is 1, 2^0 is 1 and 2^0 is 0. When you press the key ESC, the first LED on the Heep Test Module should light. Release the key and the first light should go off.

Now check to see if the output code is correct. Do this by checking the LED's against the Output Coding Table. You should have the next (second from left) LED off (E), the next six LED's on and the last (far right) LED off.

5. **Perform NORMAL mode test.** With the keyboard in NORMAL (press and release SHIFT to ensure that keyboard is not in SHIFT LOCK) depress the keys one at a time as called out in the Output Coding Table. Verify the output codes from the Heep Test Module by checking against the Output Coding Table.
6. **Perform SHIFT mode test.** Depress the SHIFT LOCK key and release. You are now in SHIFT mode. Depress the keys one at a time as called out in the Output Coding Table. Check the output code response as called out in the table and as indicated by the LED's of the Heep Test Module.
7. **Press SHIFT key and release.** This takes you out of shift mode.
8. **Disconnect the +5-volt DC power** from pin 1 of Heep Test Module.
9. **Disconnect the ground return** from pin Z of the Heep Test Module.
10. **Remove the Heep Test Module** from the Printed Circuit Board.

The OUTPUT CODING TABLE is divided into two major sections — NORMAL and SHIFT. In NORMAL, the left-hand column lists the lower case symbols of the keyboard. In SHIFT, the left-hand column lists the marked upper case symbols of the keyboard or unmarked symbol abbreviations of the ASCII Code. Unmarked symbol abbreviations are preceded by an asterisk (*) in the SYMBOL column and are explained following this table. The OUTPUT CODE columns are sub-divided into 8 sections — these being E, 2^6, 2^5, 2^4, 2^3, 2^2, 2^1, and 2^0. This division is indicative of the encoder output bits. Beside each symbol is the ASCII code for that symbol. The right-hand columns list the equivalent hexadecimal number.

NORMAL

SYMBOL	E	2^6	2^5	2^4	2^3	2^2	2^1	2^0	HEX
ESC	0	1	1	1	1	1	1	0	7E

Specification:	

FUNCTION	• This is a rare TRS-80 Initial Project Protype Computer consists of:
	  • Motherboard and CPU
	  • Power Supply
	  • ASCII Keyboard
	  • Red LED Screen (16 Characters x 2 Lines)

ACCESSORIES & DOCUMENTS	• Keyboard ASCII translation manual • Original printed initial system Assembly code sheets • Hard Cover Storage briefcase
POWER SUPPLY	• **System**: 120V Only (Internal PSU) Plug Type: TYPE B, USA, 2 Thin Flat + 1 Thick Round Pins
SPECIAL INSTRUCTIONS	This is uncompleted prototype initial project for the TRS-80 computer and not ready to RUN.

(SS01) Support Items

Item Name	Photo	Description	Count
Power Transformer: 120V to 240V and vice versa		• Newstar SVC-1000 Power Regulator Stabilizer Voltage Transform, LCD display, 1000 VA /750 watts • Make sure to manually select the correct source voltage of your country • Default source voltage is : **240V** • Plug Type: TYPE G, UK, 3 Thick Flat Pins	**4**
Power Transformer: 120V to 240V and vise versa		• Newstar SVC-500 Power Regulator Stabilizer Voltage Transform, LCD display, 500 VA /360 watts • Make sure to manually select the correct source voltage of your country • Default source voltage is : **240V** • Plug Type: TYPE G, UK, 3 Thick Flat Pins	**1**
Dual Voltage Converter: 120V to 240V and vice versa		• Terminator Tacc 80M • AC to AC Dual Voltage Converter from Terminator 110V-220V / 220V-110V. (80 W) • Make sure to manually select the correct source voltage of your country • Default source voltage is: **240V**	**2**
Dual Voltage Converter: 120V to 240V and vice versa		• Terminator Converter With Multi Travel Plug & Socket (150W) • AC to AC Dual Voltage Converter from Terminator 110V-220V / 220V-110V. (150 W) • Make sure to manually select the correct source voltage of your country • Default source voltage is: **240V**	**2**

Power Extension and socket duplicator		• 4-way universal power cord extension • Plug Type: TYPE G, UK, 3 Thick Flat Pins	**2**
Power Socket Adapter		• Universal power adapter with an intelligent design that enables compatibility with devices up to 10A-250V, and 2500W power • All-in-one international travel adapter with US / EU / UK / AU plugs that covers more than 150 countries • Self-resetting fuse for protection against overload and short circuit	**4**
Power Socket Extender		• For US 120V sockets • 3 OUTLET WALL TAP Sideways POWER ADAPTER Plug UL GROUNDED 3 WAY PRONG ELECTRIC • Plug Type: TYPE B, USA, 2 Thin Flat + 1 Thick Round Pins	**1**
Phone Holder / Stand		• Padom Cell Phone Stand Foldable Portables Phone Holder 120°Angle Tablet Stand Height Adjustable for iphone Stand Non-slip Phone Stand for Desk for/Smartphones/ipad/Tablet (White)	**5**
Tablet Holder / Stand		• Adjustable Metal Book Stand Folding Reading Stand Anti-Slip Desk A5 Size, with Page Clips (Metal White)	**1**
